CAREER OBJECTIVE

Frontend Developer with over 4 years of hands-on experience in React, Next.js, and TypeScript. Experienced in building web applications from the ground up, designing reusable UI components, and optimizing responsive interfaces across desktop, mobile, and WebView. Solid background in state management, complex form handling, REST and GraphQL integration, and collaborative Agile development.

TECHNICAL SKILLS

Core Technologies	TypeScript, JavaScript (ES6+), React, Next.js, HTML5, CSS3, SCSS
UI Libraries & CSS	Tailwind CSS, Ant Design, Shadcn UI, HeroUI, Bootstrap, Vuetify
State & Data Management	Redux, Redux-Saga, RTK Query, Vuex, Axios
Forms & Validation	Formik, Yup
API & Data Processing	RESTful APIs, GraphQL, Axios, ExcelJS
Performance & Optimization	Lazy Loading, Code Splitting, API Caching, Rendering Optimization, Image Optimization
Development Tools	Git, GitLab, Docker (Fundamentals), PM2 (Fundamentals), Cursor, Codex
Backend (Fundamentals)	Node.js, Express.js, NestJS, Prisma, SQL, MongoDB
Methodologies & Concepts	Responsive Web Design, Reusable Component Design, Cross-browser Compatibility, WebView Development, Role-based Access Control (RBAC)

WORK EXPERIENCE

Personal Projects & Technical Growth

12/2025 – Present

Currently developing full-stack personal projects, with Badminton Shop as a key project, using Next.js, NestJS, TypeScript, PostgreSQL, and Prisma. Focused on strengthening end-to-end application development skills, practicing modern software architecture, and building highly reusable components.

- Designed and implemented a monorepo architecture consisting of frontend, backend, and admin applications, with a modular codebase that is easy to maintain and extend.
- Built product management, category management, user authentication, and RESTful API features, while practicing data integration and management with PostgreSQL and Prisma.
- Developed responsive interfaces using Next.js, Tailwind CSS, and TypeScript, focusing on user experience and reusable components.
- Practiced real-world application deployment on Linux, Docker, and PM2, while building a CI/CD pipeline with GitLab to automate build and deployment processes.
- Strengthened knowledge of NestJS, Prisma, PostgreSQL, Docker, and CI/CD through the development, testing, and deployment of the project.

EnjoyWorks Company — Frontend Developer

01/2023 – 11/2025

Project: South Korean Local Government Platform

Team size: 20 members (Frontend: 6)

Description: A labor management platform for South Korean local government offices, tracking seasonal foreign workers, farm employers, and job placements through an admin portal and mobile WebView.

Key Responsibilities:

- Built the admin portal from the ground up with React and TypeScript, structuring the codebase, data flow, and core views.
- Worked with BAs, PMs, and QA engineers to clarify user stories, review specifications, and spot edge cases early.
- Created core modules for worker profiles, employer records, seasonal assignments, metrics dashboards, and large data tables.
- Optimized responsive layouts across desktop, tablet, mobile browsers, and native app WebViews.
- Managed asynchronous data flows with Redux-Saga and handled complex multi-step forms using Formik and Yup.
- Implemented Role-Based Access Control (RBAC) across Super Admin, Master Admin, and Admin levels.
- Developed Excel import and export features with ExcelJS to handle thousands of worker records efficiently.
- Optimized file uploads with client-side image compression, HEIC-to-PNG conversion, and sequential batching to avoid server spikes.
- Added multi-language support using i18next, and managed application builds and uptime on Linux VPS via PM2.

Technologies: React, Next.js, TypeScript, Redux-Saga, Formik, Yup, i18next, Tailwind CSS, Ant Design, Shadcn UI, ExcelJS, Git, GitLab

Project: Goodtraepay

Description: A WebView-based mobile wallet supporting NFC and QR payments. Responsible for developing social feeds, surveys, Q&A forums, and daily challenge features.

Key Responsibilities:

- Built user interfaces for community feeds, user surveys, Q&A forums, and daily challenges in React.
- Ensured WebView pages rendered accurately and scrolled smoothly inside native mobile containers.
- Collaborated with backend and QA teammates to test API contracts and resolve UI defects.
- Packaged production bundles and deployed code updates to Linux VPS test and production instances.

Technologies: React, Redux, Redux-Saga, RTK Query, TypeScript, Tailwind CSS, SCSS, Formik

Project: Linglow Admin & Partner Portal

Description: An administrative and partner portal enabling employers to post job openings, screen candidates from the Linglow mobile app, and track hiring pipelines.

Key Responsibilities:

- Maintained and expanded web portals for internal admins and recruitment partners using Next.js and TypeScript.
- Created reusable UI components for account management, job publishing, and applicant screening.
- Coordinated with backend developers and UI designers to refine user journeys and polish interface interactions.

Technologies: Next.js, React, TypeScript, Redux, RTK Query, Tailwind CSS, HeroUI, Formik, Yup

Product: linglow.net

SmartDev Company — Frontend Developer

03/2021 – 10/2022

Project: Insurance Platform for M&A

Team size: 5 members

Description: A web application supporting underwriting workflows and insurance policies for corporate Mergers and Acquisitions (M&A) deals.

Key Responsibilities:

- Developed and maintained user interfaces for M&A insurance workflows using Vue.js and Vuetify.
- Built modular UI components to keep styling consistent and simplify future updates.
- Participated in Agile/Scrum ceremonies and communicated directly with clients to clarify requirements and share progress.

Technologies: Vue.js, Vuetify, JavaScript, HTML5, CSS3, Git, GitLab

Project: PowerSave 3-Year Insurance Channel (Fubon Life)

Team size: 5 members

Description: An online portal allowing retail customers to purchase life insurance policies from Fubon Life.

Key Responsibilities:

- Built and maintained customer-facing web pages for insurance sign-ups using JavaScript and jQuery.

- Turned design mockups into responsive pages and integrated GraphQL endpoints with a backend team based in Singapore.
- Fixed cross-browser quirks across Safari, Chrome, and Firefox to ensure reliable presentation.

Technologies: JavaScript, jQuery, HTML5, CSS3, GraphQL, Git, GitLab

Product: echannel.fubonlife.com.hk

NCC ASIA Company — Frontend Developer

12/2019 – 12/2020

Project: Meeting Hub (Hotel Booking Platform)

Team size: 4 members

Description: An online booking website for searching and reserving hotel rooms.

Key Responsibilities:

- Developed frontend pages for hotel reservations using Vue.js and Element UI.
- Connected RESTful APIs with Axios and handled centralized client state using Vuex.
- Adjusted layouts for different screen sizes and collaborated with teammates through Git.

Technologies: Vue.js, Vuex, Axios, Element UI, JavaScript, HTML, CSS, Git, GitLab

Project: Insurance Management System

Description: Maintained an internal web application used for insurance operations.

Key Responsibilities:

- Fixed reported bug tickets and maintained stability across existing modules.
- Supported the team in building and updating views using Angular 6 and Bootstrap.

Technologies: Angular 6, Bootstrap, TypeScript, Git, GitLab

Vinteli Company Limited — Technical Engineer

11/2017 – 09/2019

- Operated and maintained the Building Management System (BMS) at Da Nang International Terminal T2, keeping HVAC and wastewater monitoring systems running smoothly.
- Supervised site installation of Access Control Systems (ACS), CCTV cameras, and Wi-Fi networks at Cam Ranh International Terminal.
- Worked directly with on-site contractors to verify installation quality and keep work on schedule.
- Conducted field testing, formal inspections, and handoffs with facility managers.
- Completed technical training workshops on Smart Home automation solutions.

Mabuchi Motor Danang Co., Ltd. — Production Innovation Staff

08/2016 – 06/2017

- Planned and coordinated projects that integrated automated machinery into motor production lines.
- Collaborated with Design, Procurement, Assembly, and Quality Control teams to clear blockers and hit milestone dates.
- Monitored machine test runs on the factory floor before clearing them for full production runs.
- Maintained technical specifications, equipment checklists, and project records.

EDUCATION

Danang University of Science and Technology (DUT)

2011 – 2016

Major: Mechatronics Engineering (Engineer's Degree) | **GPA:** 3.00 / 4 | **Classification:** Good

FOREIGN LANGUAGES

English — Working Proficiency

- Proficient in reading technical documentation and API specifications.
- Effective written communication via email and workplace messaging.
- Basic conversational English for daily team interactions.
